PROFESSIONAL SUMMARY

Senior Frontend & Mobile Engineer with 5+ years of experience delivering production-grade web and mobile applications across fintech and B2B SaaS environments. Specialises in the React/Next.js ecosystem with hands-on React Native mobile development at scale.

Track record of owning performance-critical frontend architecture, migrating polling-based systems to real-time WebSocket infrastructure, and shipping AI-powered product features using OpenAI APIs. Operates effectively as an individual contributor and informal technical lead in fully remote, cross-timezone teams across the US, EU, and Africa.

CORE COMPETENCIES

Frontend: React, Next.js (App Router / Pages), TypeScript, JavaScript ES6+, Tailwind CSS, Vue 3, Nuxt

Mobile: React Native (Expo & bare workflow), cross-platform iOS & Android, offline-first patterns

State & Data: React Query (TanStack), Redux Toolkit, Zustand, GraphQL, REST API design

Real-Time: WebSockets, Socket.IO, SignalR, event-driven UI architecture

AI Integration: OpenAI APIs (Chat, Completions), prompt engineering, AI-assisted feature development

Backend (Working Knowledge): Node.js, NestJS, Express, PostgreSQL, Prisma

Testing & Quality: Jest, React Testing Library, Cypress, TDD, code review, accessibility (WCAG 2.1)

DevOps & Tooling: Git, GitHub Actions, Vercel, AWS S3, Docker

PROFESSIONAL EXPERIENCE

Senior Frontend & Mobile Engineer | Glover (Techstars '22, B2B Fintech SaaS) *Jun 2022 – Present*
Remote — Distributed team across US, EU & Africa

- Led frontend and React Native mobile development across the core product, contributing to web and cross-platform iOS/Android applications used in production.
- Drove a frontend performance programme — implementing code splitting, lazy loading, tree shaking, and image optimisation — reducing initial page load time by ~35% and improving Lighthouse scores from ~60 to 90+ across key routes.
- Refactored over-fetching patterns in REST and GraphQL integrations, consolidating redundant API calls and reducing unnecessary network requests by ~30% across primary user journeys.
- Owned component architecture and shared design system for web and mobile, establishing reusable patterns that reduced feature build time for subsequent engineers.
- Contributed to engineering culture through structured code reviews, architectural decision records (ADRs), and mentoring of junior engineers within a cross-timezone Agile team.

Lead Full-Stack Engineer | WeTuli (Real-Time Collaboration Platform) *Oct 2024 – Present*
Remote — Part-time technical leadership engagement

- Defined end-to-end system architecture for a greenfield real-time platform, selecting and implementing Next.js 14 (App Router), NestJS, WebSockets, and React Native as the core stack.

- Replaced a polling-based update model with persistent WebSocket connections, achieving sub-second data synchronisation and eliminating redundant server load caused by ~N requests/minute.
- Integrated OpenAI APIs to deliver AI-assisted features — automating previously manual user workflows and introducing context-aware interactions that reduced user effort on key tasks.
- Built and shipped React Native mobile features (iOS & Android) alongside the web platform, maintaining a shared API contract and consistent UX across both surfaces.
- Established engineering best practices including branching strategy, PR templates, automated linting/testing in CI, and onboarding documentation — measurably improving team delivery consistency.

Frontend Engineer | Resoudre (Enterprise Analytics Platform)

May 2024 – Sep 2024

Remote — Contract

- Built a large-scale data analytics interface using Vue 3, Nuxt, Tailwind CSS, and SignalR, designed to handle high-frequency real-time data updates across complex dashboard views.
- Optimised rendering performance for data-heavy tables and charts, resolving frame-rate issues on high-frequency SignalR streams and achieving consistently smooth 60fps interactions.
- Implemented WCAG 2.1 AA accessibility standards and technical SEO improvements (meta, structured data, Core Web Vitals), expanding product reach and improving organic discoverability.
- Optimised API interaction patterns to reduce over-fetching and improve perceived responsiveness across the platform's most data-intensive screens.

Frontend Engineer | Patricia Technologies (Fintech / Crypto Trading Platform)

Jul 2021 – Jun 2022

Remote

- Built responsive, accessible web application features using React, Next.js, and TypeScript for a consumer-facing fintech product serving active retail users.
- Integrated third-party financial data and payment APIs, extending product functionality and enabling new user-facing transaction capabilities.
- Improved component-level accessibility (WCAG) and cross-browser compatibility, contributing to a more inclusive product experience across a diverse user base.
- Collaborated with product and design teams in an Agile workflow to deliver consistent, pixel-accurate UI across multiple product releases.

SELECTED PROJECTS

Real-Time Communication Platform | Next.js · NestJS · WebSockets · React Native

- Architected and shipped a full-stack real-time platform from zero, replacing a polling model with persistent WebSocket connections for sub-second multi-user sync across web and mobile.

AI-Powered Feature Integration | Next.js · OpenAI API · TypeScript

- Integrated OpenAI APIs into production systems to automate workflows and enhance user interactions
- Reduced manual processes and introduced intelligent, context-aware features

Enterprise Analytics Dashboard | Vue 3 · Nuxt · SignalR · Tailwind CSS

- Developed scalable frontend architecture for data-heavy dashboards using Vue and SignalR
- Optimized rendering and data flow for smooth interaction with frequently updating datasets

EDUCATION

Post-Graduate Diploma, Project Management: Fanshawe College, Canada.

MSc, Information Systems Management: De Montfort University, UK.

BSc, Geology: University of Lagos, Nigeria.

ADDITIONAL

Work Authorisation: Nigerian citizen. Open to remote roles globally (UK, EU, US). Available for right-to-work sponsorship discussions.

Availability: Available immediately for full-time remote engagements.

Time Zone Coverage: WAT (UTC+1) — comfortable overlapping with UK (BST/GMT), EU (CET), and US East Coast (EST) working hours.
